

# Coor supply chain climate action

Dear Supplier,

Coor has committed to the 1.5°C ambition with Science Based Targets Initiative (SBTi). To achieve the 1.5°C ambition, global greenhouse gas (GHG) emissions must be halved by 2030 towards net zero by 2050 while protecting nature. To reach our target and support the global initiative we need your help.

It is imperative that you, as a supplier to Coor and Coor's customers, also commit to this target as the commitment to SBTi will be an important factor in Coor's selection of suppliers. Therefore, we are asking you as our supplier to:

1. Set a public target to halve the absolute emissions by 2030 and start taking action
2. Visit [www.sciencebasedtargets.org](http://www.sciencebasedtargets.org) to learn more about the 1.5°C ambition and how to commit.
3. Set a plan on how the Supplier can commit to the SBTi 1.5°C ambition and start the process of getting the Supplier's targets validated and approved by 2026.

Large companies shall set climate targets approved by SBTi. Small and medium companies shall set validated climate targets by SBTi or similar. Climate targets validated by SBTi or similar means at least halve emissions by 2030, achieve net zero emissions by 2050, and report on the Supplier's progress yearly

An urgent, collaborative and aligned approach is needed to achieve the required momentum for sufficient global climate action and reduce global greenhouse gas emissions on our planet. We look forward to you joining us in this necessary transformation to keep global warming below 1.5°C. To our already aligned suppliers, we thank you for your dedication and look forward to mutual progress on this topic.

Please get back to us with an update on your view on committing to SBTi and a 1.5°C aligned target.

Thank you for your commitment and valuable support.

Best regards,

**Country CEO**  
CEO Coor
